Assignment 2: Software Requirements Specification

Team: Group 4 warrior-bot

Project Title: warrior-bot Campus CLI Assistant

Members:

1. Akrm Al-Hakimi
2. Rylan van de Wetering
3. Natali Chaaban
4. Elma Okanovic
5. Nick Leskie

Meetings date	Participants
01/29/2026	Akrm, Rylan, Natali, Elma and Nick
02/01/2026 (Online)	Akrm, Rylan, Natali, Elma, and Nick
02/03/26 (In Class)	Akrm, Rylan, Natali, Elma, Nick

Stakeholders	Requirements
Users (Engineering, CS/IT, New Students, Faculty and Staff):	NR4: Simple Install in less than 5 clicks FR1: Help command FR2: Go command accesses academia in browser FR3: Go command accesses library resources in browser FR4: Go command accesses Bookstore resources in browser FR5: Where command returns address of buildings FR6: Where command returns Instructor offices FR7: Where command returns Instructor contact info FR8: Where command returns Instructors Department FR9: Where command handles errors for missing instructor information FR10: Where command returns locations of on campus restaurants FR11: Book command lists each library to choose to book

	FR12: Book command lists each building to choose to book study rooms
System:	NR5: Code Written in Python F16: Book command authentication for booking study rooms
All:	FR13: Allows Querying data FR14: Title Screen proving that program is running FR15: Closing program screen proving program is done running NR1: Run on all platforms NR2: Results in at average 15 seconds NR3: Run on users' device NR6: Runs in Command Prompt

FR1. Help Command		
Goal: The terminal will display a pre-selected message introducing the CLI tool along with a help command for new and returning users.		
Stakeholders: Users		
Description: When a user accesses the CLI tool, the terminal will display an introduction message and a help command. This command, when used, will show users all available commands and an example of how to use each.		
Origin: All team members came up with this idea in order for users to be familiar with how the tool works.		
Version: 1.0	Date: 01/29/26	Priority: 1

FR2. Go command accesses academia in browser		
Goal: Make the academia resources easily accessible		
Stakeholders: Users		
When the user wants to find the resources found within academia, they will use this command along with specifying which resource they would like to find. The program will then pull up all the appropriate information in the browser.		
Origin: All team members came up with this idea as it expands upon what was said in the project proposal		
Version: 1.0	Date: 01/29/26	Priority: 1

FR3. Go command accesses library resources in browser
Goal: Goal: Make the library resources easily accessible
Stakeholders: Users
When the user wants to find the library resources, they will use this command along with specifying which library resource they would like to find. The program will then pull up all the appropriate information in the browser.
Origin: All team members came up with this idea as it expands upon what was said in the project proposal

Version: 1.0	Date: 01/29/26	Priority: 1

FR4. Go command accesses bookstore resources in browser		
Goal: Goal: Make the bookstore resources easily accessible		
Stakeholders: Users		
When the user wants to find the resources related to the bookstore, they will use this command along with specifying which resource they would like to find. The program will then pull up all the appropriate information in the browser.		
Origin: All team members came up with this idea as it expands upon what was said in the project proposal		
Version: 1.0	Date: 01/29/26	Priority: 1

FR5. Where command returns address of buildings		
Goal: Goal: Easily get addresses for every building		
Stakeholders: Users		
When the user wants to find a building on campus, they can use the 'where' command along with specifying which building and the program will display the address of the building		
Origin: All team members came up with this idea as it expands upon what was said in the project proposal		
Version: 1.0	Date: 01/29/26	Priority: 1

FR6. Where command returns Instructor offices		
Goal: Retrieve instructor office, if accessible.		
Stakeholders: Users		
The idea is to allow for a user to input their Professor or TA's name, a flag for their office and retrieve the address to their office.		
Origin: Expanded upon from project proposal		
Version: 1.0	Date: 01/29/26	Priority: 1

FR7. Where command returns Instructor contact info		
Goal: Retrieve instructor contact info (phone, email, etc), if accessible.		
Stakeholders: Users		
Allow for students to quickly retrieve the contact info of their Professor or TA such as their email, or office phone number.		
Origin: Expanded upon from project proposal.		
Version: 1.0	Date: 01/29/26	Priority: 1

FR8. Where command returns Instructors Department		
Goal: Retrieve the department of the instructor or TA.		
Stakeholders: Users		
Allow for users to see which Professor or TA works in what department.		
Origin: Expanded upon from project proposal.		
Version: 1.0	Date: 01/29/26	Priority: 1

FR9. Where command handles errors for missing instructor information		
Goal: Give the user proper context if information is missing.		
Stakeholders: Users		
If a specific piece of information is requested, but not found from the internet, we give them a reason why the info was not found (i.e. “this professor does not have their office address listed)		
Origin: Discussion around user accessibility and helpful error messages.		
Version: 1.0	Date: 01/29/26	Priority: 1

FR10. Where command returns locations of on campus restaurants

Goal: Allow users to get a list or selective grouping of restaurants available on campus.		
Stakeholders: Users		
Users should be able to retrieve a list or selection of restaurants for their hours, address and menu options from their terminal.		
Origin: Expanded upon from project proposal.		
Version: 1.0	Date: 01/29/26	Priority: 1

FR11. Book command lists each library to choose to book		
Goal: Allows users to access all WSU libraries that have study room options.		
Stakeholders: Users		
When users access the 'book' command, they will be prompted to select an available WSU library. Upon selecting their library of choice, they will see all open study rooms to select from.		
Origin: Planned during first meet on 01/29/26.		
Version: 1.0	Date: 02/01/26	Priority: 1

FR12. Book command lists each building to choose to book study rooms
Goal: Allows users to access all WSU buildings that have study room options.

Stakeholders: Users		
When users access the 'book' command, they will be prompted to select an available WSU building. Upon selecting their building of choice, they will see all open study rooms to select from.		
Origin: Planned during first meet on 01/29/26.		
Version: 1.0	Date: 02/01/26	Priority: 1

FR13. Allows Querying data		
Goal: To gather data from WSU's resources, we will access public WSU information and insert it inside of our tool.		
Stakeholders: All		
This is a way to gather public information to be used in our tool. Instead of creating or accessing a database, we will be using HTTP requests through online WSU resources and directing them through our tool for users.		
Origin: Planned as a group in the first week.		
Version: 1.0	Date: 02/01/26	Priority: 1

FR14. Title Screen proving that program is running
Goal: For users to see that the program is running on their device.

Stakeholders: All		
For users to visibly see that the program is running on their device, we will have a title or 'welcome' screen that introduces the tool, along with a 'help' command prompting them to a refresher on warrior-bot commands. From there, they can begin typing in their terminal.		
Origin: Planned during our meet on 01/29/26.		
Version: 1.0	Date: 02/01/26	Priority: 1

FR15. Closing program screen proving program is done running		
Goal: Provide clear feedback to users that the program has successfully terminated.		
Stakeholders: All		
Description: When a user exits the CLI tool (using a quit/exit command or closing the program), the terminal will display a closing message confirming that warrior-bot has shut down properly. This provides visual confirmation that the session has ended and no processes are still running in the background.		
Origin: Planned during our meeting on 01/29/26 to provide a complete user experience with clear entry and exit points.		
Version: 1.0	Date: 01/29/26	Priority: 1

FR16. Book command authentication for booking study rooms
Goal: Users must have a way to show proof of booking a study room through user authentication.
Stakeholders: System

When users book a study room, they will need a form of authentication for valid room booking. Users will provide an email, student id, and/or full name as proof of booking a study room. If provided an email, it will be directed to their email of choice.		
Origin: Planned as a group on 02/02/26.		
Version: 1.0	Date: 02/02/26	Priority: 1

NFR1. Run on all platforms		
Goal: Program to run on all Operating Systems such as Windows, Linux and IOS		
Stakeholders: All		
Accommodate for all users based on the platform they use so this program is accessible to all students		
Origin: Discussion on goals for our project and what OS our group use		
Version: 1.0	Date: 01/29/26	Priority: 1

NFR2. Results in at average 15 seconds
Goal: User receives results in a reasonable time
Stakeholders: All

The goal is to produce results for the user within an average of 15 seconds. Users would receive results faster, but the higher average is for those who have older or slower computers		
Origin: Discussion on requirements		
Version: 1.0	Date: 01/29/26	Priority: 1

NR3. Run on users' device		
Goal: Run on the user's personal device		
Stakeholders: All		
The program should run on the user's personal device once the program is installed. This prevents the students from having to use a university computer or virtual desktop.		
Origin: Discussion on how the program works and what OS our group		
Version: 1.0	Date: 01/29/26	Priority: 1

NR4. Simple Install in less than 5 clicks
Goal: Install is simple for those who are less experienced with computers
Stakeholders: User

Makes the install as straight forward as can be to accommodate for users of different knowledge of technology.		
Origin: Discussion on requirements		
Version: 1.0	Date: 01/29/26	Priority: 1

NR5. Code written in python		
Goal: All code for our project will be in python		
Stakeholders: System		
Decided to code the project ion python because all group members know the language and have experience writing code with it.		
Origin: Discussion on how the program works and our groups programming strengths		
Version: 1.0	Date: 01/29/26	Priority: 1

NFR6. Runs in Command Prompt
Goal: All commands are done in command prompt
Stakeholders: All

<table>
<tr><td colspan="3">All the commands that the user will use are all done in command prompt. Command prompt is accessible on all platforms and avoids having a user interface.</td></tr>
<tr><td colspan="3"><u>Origin:</u> From project proposal and discussion on how the program works</td></tr>
<tr><td><u>Version:</u> 1.0</td><td><u>Date:</u> 01/29/26</td><td><u>Priority:</u> 1</td></tr>
</table>
